Clearwater

Healthcare – Secure, Compliant, Resilient

Monthly Cyber Briefing

May 2023: Healthcare Threat Intelligence

Logistics

- All attendees in “Listen Only Mode”
- Please ask content related questions in Q&A
- Cyber Briefings are eligible for HIMSS & CHIME CE credit
- Recording and final slides shared within 48 hours

**HIMSS & CHIME
approved!**

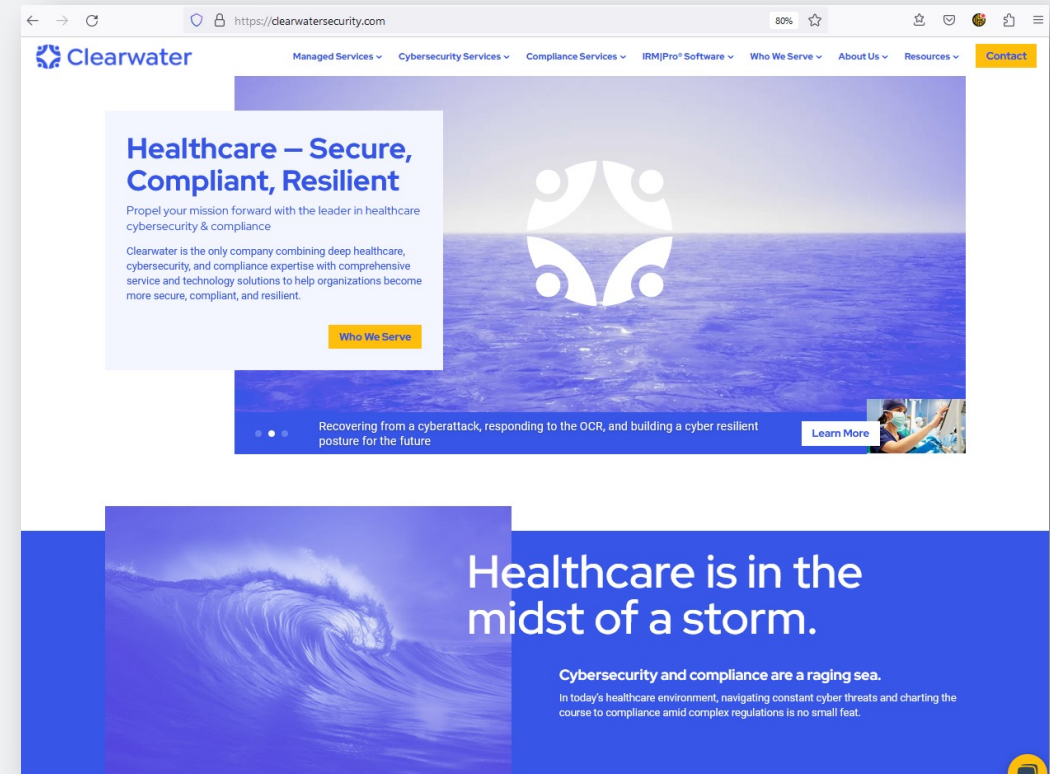

2023 Monthly Cyber Briefings are now eligible for
HIMSS & CHIME certification CE credit

Agenda

- Clearwater Update
- Updates from HHS 405(d) HICP Program
- Key Takeaways for Hospital Resiliency Landscape Analysis
- Threat Briefing

Company Announcements

- Clearwater has a new brand identity
- New corporate website:
www.clearwatersecurity.com
- Email domain has changed to clearwatersecurity.com – please white list
- Company legal name is now [Clearwater Security and Compliance LLC](#) however, we will still go by “Clearwater”

New Clearwater Security & Compliance website

May's Speakers

Steve Cagle, MBA, HCISSP

Chief Executive Officer

Dave Bailey, CISSP

VP, Consulting Services

- Cyber Update

Steve Cagle

Updates from HHS 405(d) HICP Program

[The Health Industry Cybersecurity Practices: Managing Threats and Protecting Patients \(HICP\) 2023 Edition](#)

[Knowledge on Demand](#)

[Hospital Resiliency Landscape Analysis](#)

Hospital Cyber Resiliency Initiative Landscape Analysis

■ Objectives

- Understanding of the current cybersecurity capabilities and preparedness across participating U.S. hospitals
- Input into prioritized cybersecurity practices as well as other considerations the U.S. government might take in improving cybersecurity resiliency

■ Data Sources

- Threat data from U.S. government, vendors, and open source intelligence
- CHIME's Most Wired Survey (n=377), sponsored by First Health Advisory
- A survey (n=59) conducted in partnership with Censinet, the American Hospital Association (AHA) and KLAS
- 20 conversations with hospitals across U.S.

Key Findings of Hospital Cyber Resiliency Landscape Analysis

Ransomware

Directly targeted ransomware attacks aimed to disrupt clinical operations are #1 Threat to Hospitals

Inconsistent Controls

Variable adoption of security controls coupled with a changing landscape expose hospitals to more cyber attacks

Email Protection

Hospitals measure success in implementing email protections which is key to success

Supply Chain

Supply chain risk is pervasive for hospitals: half don't assess risk for patient safety concerns

Medical Devices

Minority don't have their third parties all covered and half don't assess risk for patient safety concerns

Key Findings of Hospital Cyber Resiliency Landscape Analysis (continued)

Resiliency

There is significant variation in cybersecurity resiliency among hospitals – investment levels in cybersecurity vary between 0.07% and 0.75%

Legacy hardware & Software

The use of antiquated hardware, systems, and software by hospitals is concerning

Cyber Insurance

Cybersecurity insurance premiums continue to rise, as do retention, while coverage limits fall, and cost of a breach is higher than ever before

Talent

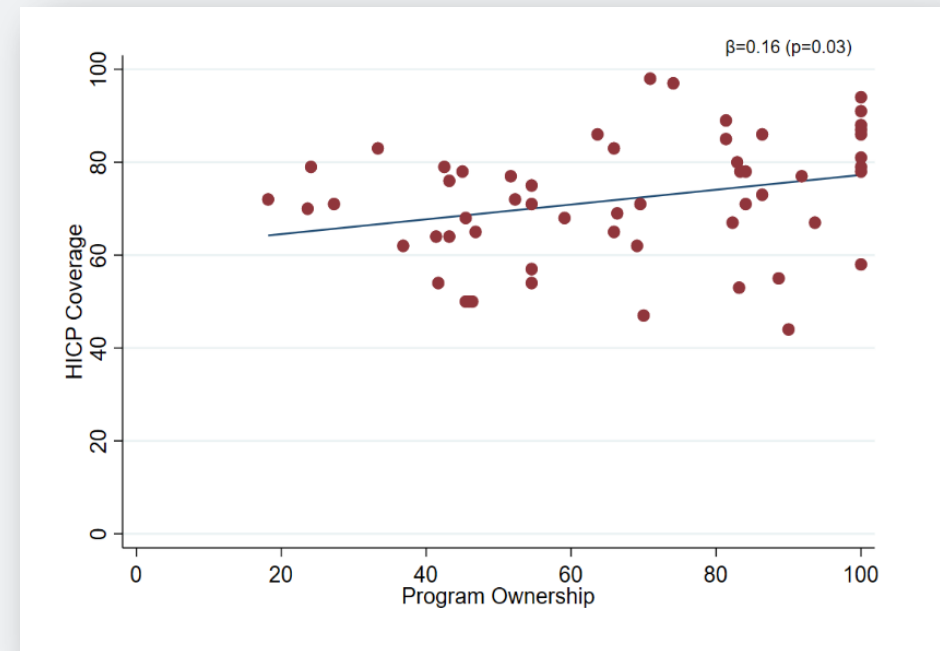

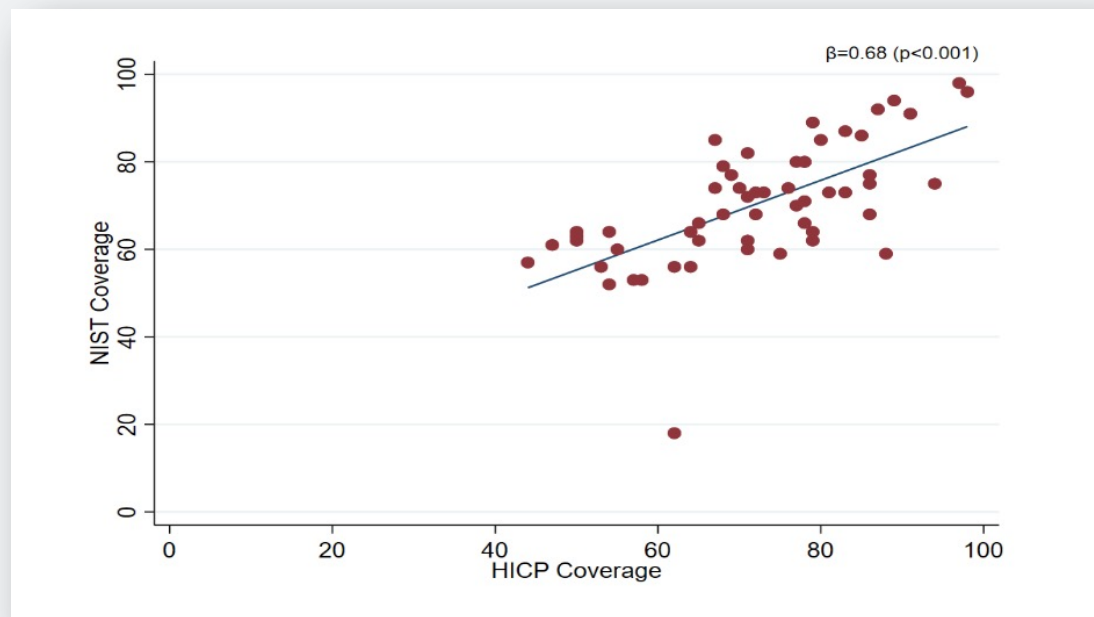

Securing cyber talent with requisite skills and experience is challenging, especially for smaller hospitals

HICP Adoption

Adopting HICP improves cyber resiliency – 0.6 correlation with the NIST Cybersecurity Framework

Correlation Between HICP & NIST CSF & Program Ownership

Strong correlation between program HICP and NIST CSF, and CISO program ownership and adoption of HICP

Clearwater Recommendations

- Perform on-going risk analysis of all information systems at the asset level to identify where gaps exist and create risk response plan based on risk level
- Consider following SP 800-37 when implementing new systems – categorize system, select and implement controls, perform risk analysis, and determine authorization to operate/use
- Move from quarterly scans to vulnerability management – ongoing scanning and remediation
- Conduct more sophisticated penetration testing such as red teaming
- Conduct a security controls validation assessment to test your defenses against specific attack scenarios
- Review network segmentation of unpatched unsupported devices
- Employ more advanced security awareness training and phishing / social engineering testing
- Architect your third-party risk management program such that it creates a tiered approach to assessing vendors based on risk to patient safety

- Healthcare Threat Intelligence

Dave Bailey

“The essence of risk management lies in maximizing the areas where we have some control over the outcome while minimizing the areas where we have absolutely no control over the outcome.”

-Peter L. Bernstein

Purpose

Provide an overview of today's adversarial threat

Present a healthcare industry assessment of the adversary

Provide top drivers of risk

Changing Risk Priorities in Healthcare

■ Past

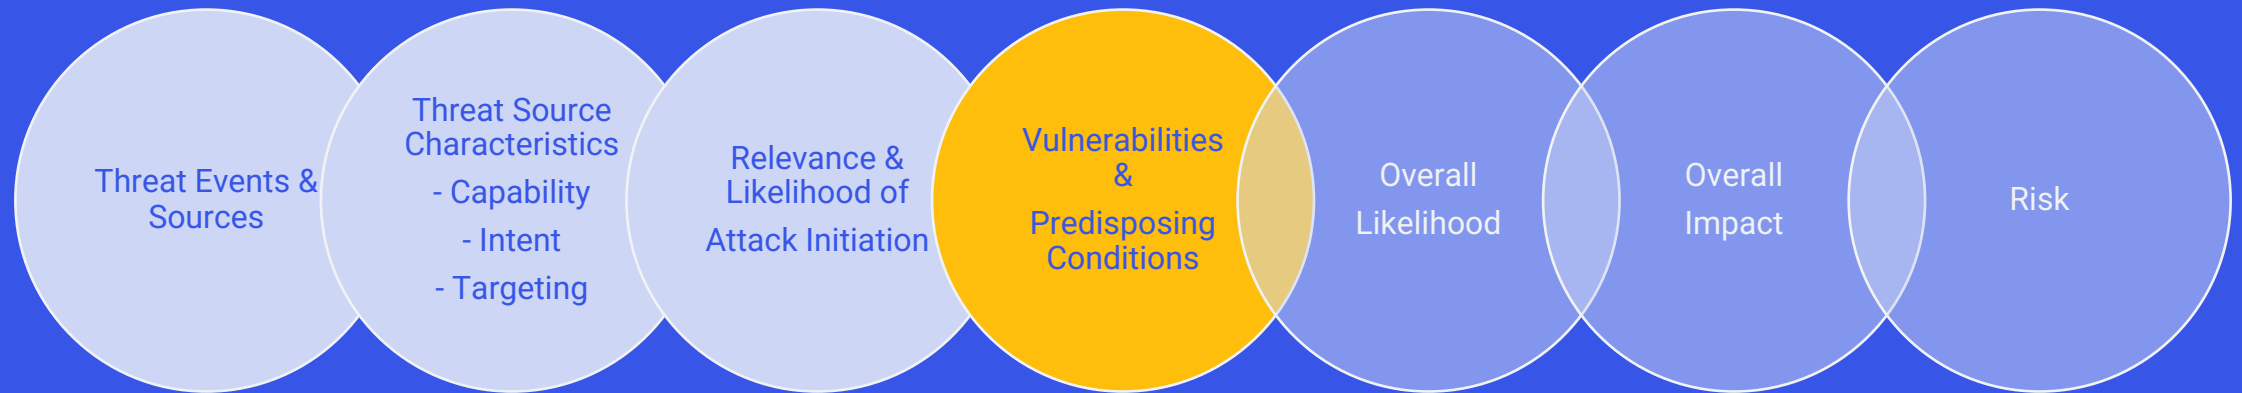

- Risk was managed with **clinical focus**
- Cyber risk management was focused on regulatory compliance
- **Data breaches** were most feared
- Audits and fines from the Office for Civil Rights were likely
- **Data protection** and **compliance** were primary goals

■ Present

- Risk is managed as a **business issue**
- Cyber risk management is focused more on availability and patient safety
- **Major incidents** (ransomware) most feared: Business shut down or failure
- Patient safety risk with clinical technology, Internet of Things
- **Business resilience** is now the primary goal

Defining Risk

Risk defined by NIST 800-30

Know your Adversary | **Know your Security Program** | Know your Risk

Healthcare Threat Assessment

Focus: Adversarial Threat

Relevant Current Events And Indicators

Joint Cybersecurity Advisory: #StopRansomware: LockBit 3.0

The LockBit 3.0 ransomware operations function as a Ransomware-as-a-Service (RaaS) model and is a continuation of previous versions of the ransomware, LockBit 2.0, and LockBit. Since January 2020, LockBit has functioned as an affiliate-based ransomware variant; affiliates deploying the LockBit RaaS use many varying TTPs and attack a wide range of businesses and critical infrastructure organizations, which can make effective computer network defense and mitigation challenging.

HC3: New Data Breaches from CLOp and Lockbit Ransomware Groups

On April 28, 2023, Ransomware-as-a-service (RaaS) groups CLOp and Lockbit recently conducted several distinct attacks, exploiting three known vulnerabilities (CVE-2023-27351, CVE-2023-27350, and CVE-2023-0669).

The CLOp ransomware used was traced to the threat actor known as Lace Tempest, and overlapped with FIN11 and TA505

HC3: Threat Briefing: EMRs A Top Target for Cyber Threat Actors

On April 07, 2023, the Health Sector Cybersecurity Coordination Center (HC3) shared a report "April 6 Threat Briefing: EMRs A Top Target for Cyber Threat Actors."

Relevant Industry Threat Briefings:

- Top threats against electronic medical and health records:
 - Phishing attacks
 - Fraud
 - Data Breaches and vulnerabilities
 - Malware and ransomware attacks
 - Encryption blind spots
 - Cloud threats/Third-party risks
 - Employees/Insider threats

HHS Briefing

Relevant Industry Threat Briefings:

Credentials & API issues continue to lead compromise factors...

Cloud Compromise Factors (Q4 2022)

Relevant Industry Threat Briefings:

Hospital Cyber Resiliency Initiative Landscape Analysis: Threats

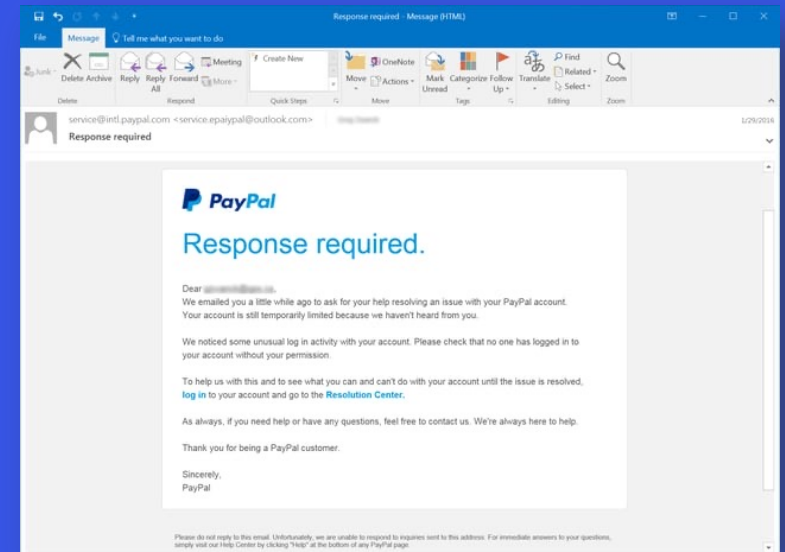

- Ransomware and Ransomware-as-a-Service (RaaS) attacks
- Cloud exploitations by threat actors
- Phishing/Spear-Phishing Attacks; specifically, those attacks that overcome MFA through social engineering
- Software and zero-day vulnerabilities
- Distributed Denial of Service attacks (DDoS)

Healthcare Industry: Accidental and Insider Threat

- **Unintentional Insider Threat:** Erroneous actions taken by individuals
- **Intentional Insider Threat:** Actions taken by individuals to knowingly harm the organization or violate policy or the law
- **Primary Threat Vector of the Adversary:** The user continues to be the primary threat vector as the source for malware and initiation of attack

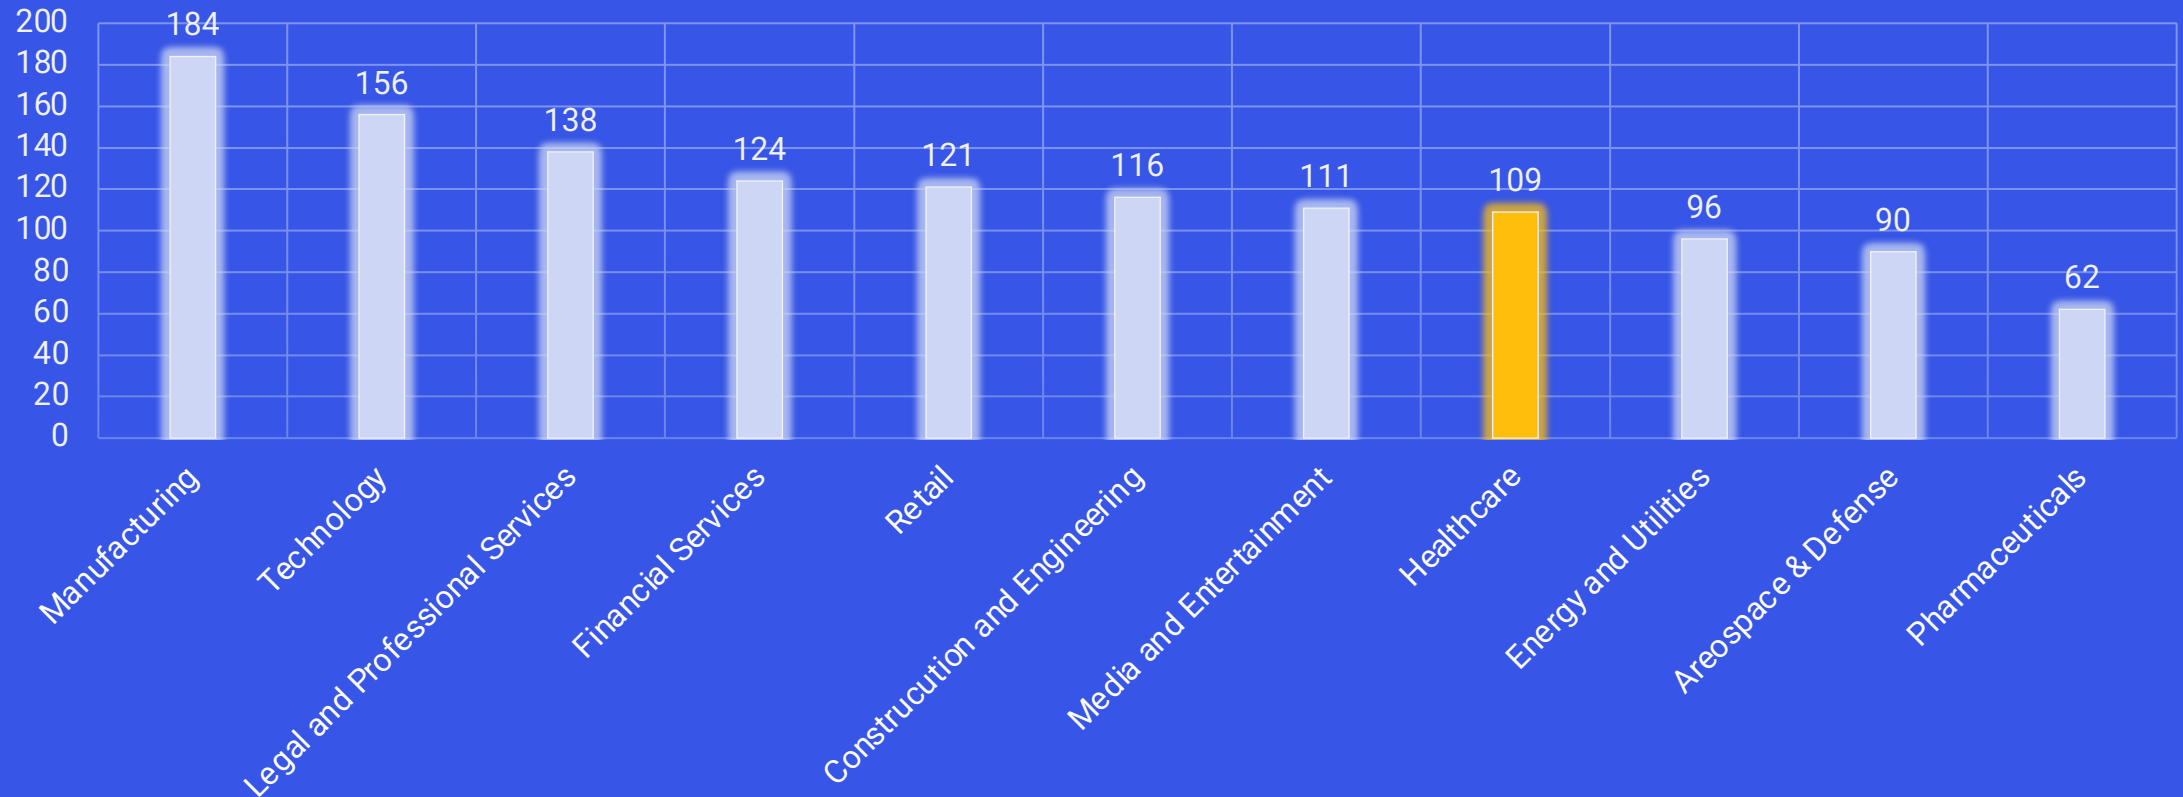

- Medium size (250 – 999 employees) Healthcare & Pharmaceuticals **ranked #2** (of 19 industries) with a **36.6% Phish-Prone Percentage**
- In 2022, across all industries and all sizes, **the average Phish-prone Percentage was 32.4%**, up 1 point from 2021. That means **one out of three employees** was likely to click on a suspicious link or email or comply with a fraudulent request.

Threat Actor Overview

As of April 2023, **109** threat actors target the US healthcare industry

Threat Actors Targeting U.S. Industries

Threat Intelligence Report – As of April 2023

- **235 Actors** targeting US Industries
- **109 Actors** targeting US Healthcare Industry
- Europe and Asia are primary known target source regions

Source Region	# Actors
Europe	20
Asia	48
Unknown	41
Total Targeting US Healthcare	109

and prove
otherwise

Healthcare Threat Assessment: Characteristics of the Adversary

CAPABILITY	Very Low	Low	Moderate	High	Very High	The adversary has a very sophisticated level of expertise, is well-resourced, and can generate opportunities to support multiple successful, continuous, and coordinated attacks.
INTENT	Very Low	Low	Moderate	High	Very High	The adversary seeks to undermine, severely impede, or destroy a core mission or business function, program, or enterprise by exploiting a presence in the organization's information systems or infrastructure. The adversary is concerned about disclosure of tradecraft only to the extent that it would impede its ability to complete stated goals.
TARGETING	Very Low	Low	Moderate	High	Very High	The adversary analyzes information obtained via reconnaissance to target persistently a specific organization, enterprise, program, mission or business function, focusing on specific high-value or mission-critical information, resources, supply flows, or functions, specific employees supporting those functions, or key positions.
RELEVANCE	Possible	Predicted	Anticipated	Expected	Confirmed	The threat event or TTP has been seen by the organization's peers or partners.
LIKELIHOOD	Very Low	Low	Moderate	High	Very High	Adversary is almost certain to initiate the threat event.

Top Drivers of Risk

An Analysis from Clearwater Assessments and Security Operations Center

Top 5 Drivers of Risk: Clearwater Risk Analysis

 Clearwater's data says...

Inadequate safeguards to protect user identities

Systems that process store or transmit ePHI are not multi-factored enabled or integrated securely into a single sign-on capability

Lack of User Activity Review

User activity and user permissions are not formally reviewed or integrated into continuous monitoring

Inadequate log aggregation & monitoring

System logging is not formally aggregated or integrated into continuous monitoring

Weak password controls

Systems are not enforcing strong password requirements on users

Lack of user account protections

Systems are not preventing simultaneous user logins or have adequately address failed login attempts

Top 5 Drivers of Risk: Clearwater SOC

 Clearwater's data says...

MFA Fatigue

As organizations expand MFA, they are trying to make it easier on the end user, and inadvertently making it easier for the user to "approve" access that is not theirs

Native Cloud Logging

Organizations are trusting that default logging in cloud services is adequate, not realizing they may be limited in scope, duration, and content to better understand what occurred

Unpatched, Legacy, or Unsupported Systems

Ineffective vulnerability management programs and lack of system development lifecycle

Inconsistent Controls Implemented

Organizations are applying different security controls for production, corporate, and development environment creating gaps in visibility and protection

Incomplete or Outdated Awareness Programs

Modern threats and tactics are changing, and many organizations have a relatively static awareness program that does not reflect this

*Moving healthcare organizations to
a more secure, compliant, and
resilient state so they can achieve
their mission.*

Upcoming Events

TN HIMSS Golf Tournament | June 9th

The poster for the 2023 Digital Health Forum features a dark background with vibrant, concentric, multi-colored circular patterns in shades of blue, green, and purple. In the top left corner is a circular logo with a stylized white 'M' on a teal background. The text "2023 DIGITAL HEALTH FORUM" is prominently displayed in the center, with "2023" in white on a teal vertical bar and "DIGITAL HEALTH FORUM" in large white letters. Below this, the dates and location "MAY 17 — 18, 2023 | NEW YORK" are written in teal. At the bottom right, the "McDermott Will & Emery" logo is visible in white, and the website "mwe.com" is at the bottom left.
